

NoPileups™ Full-Tunnel Management System

Wash More. Worry Less.

NoPileups combines revolutionary technology with a proactive service team to increase capacity and prevent unnecessary collisions.

With video and advanced computer technology, NoPileups is the most innovative car wash tunnel management system available. Customers use NoPileups to help increase capacity, identify broken or misaligned equipment and prevent unnecessary collisions.

NoPileups is backed by an industry-leading service team that continually monitors analytical data from the system, providing insights customers use to improve their washes every day.

Unlike other tunnel management and anti-collision products that only cover the exit, NoPileups protects cars across the entire length of the tunnel. It automatically stops the conveyor when an incident occurs and provides a 15-20 second video so you can identify the cause of an issue.

Customers use NoPileups analytics and reporting to understand the source and amount of downtime they incur. This helps them coach employees on ways to maximize the tunnel's potential.

Benefits

- Minimize downtime
- Wash more cars
- Reduce damage costs
- Avoid customer conflicts and improve overall satisfaction
- Protect reputation and avoid negative online reviews
- Decrease employee turnover caused by the stress of potential collisions
- Make performance improvements

Smart Exit

Smart Exit can reduce downtime by 50% compared to traditional tunnel exit collision avoidance systems.

With Smart Exit, NoPileups protection extends beyond the end of the conveyor, monitoring 10-15 feet beyond traditional tunnel exit collision avoidance systems. Smart Exit detects when vehicles stopped at the end of the conveyor create a collision threat, automatically stopping the conveyor to prevent the collision and restarting it when the situation clears.

Relying on NoPileups' computer vision rather than loops or photo eye sensors, it prevents the false positives that often plague other systems. This reduces downtime, giving you back precious wash time.

Smart Exit is perfect for:

- Tunnels with a tight egress onto a busy road
- Belt conveyors
- High tunnel volume
- Full-service tunnels where cars are waiting for aftercare services

“Every second we can shave off makes us better than the guy down the street. NoPileups is a huge competitive edge. The people who have it have the ability to wash more cars more safely than the guy down the street.”

– Bill Martin,
Metro Express
